

BS in Histotechnology licensure certification (HTL Exam)

The Bachelor of Science in Histotechnology Program at Mt. SAC will prepare students for a career in medical diagnostics by training them to prepare and evaluate tissues on a macroscopic and microscopic level and by developing strong supervisory and leadership skills necessary for high level management positions in a laboratory setting. In addition to performing complex tissue specimen preparations in the laboratory, students will complete courses in biochemistry, microbiology, anatomy and physiology, advanced histotechnology, histology and cytology, pathophysiology and anatomic pathology, advanced microscopy, and medical ethics. Clinical rotations will provide opportunities to apply these skills, while courses in laboratory management, leadership, and professionalism will prepare them for supervisory and management positions. Completion of this program will prepare students for certification by the American Society of Clinical Pathologists (HTL Exam).
