▼ ⓘ Course Outcomes

- ▶ **Beam Restriction** The student will analyze images to determine the appropriate use of beam restriction. (Active)
- ▶ **Anatomy Identification** The student will identify structures demonstrated on radiographic images (Active)
- ▶ **Positioning Terminology** The student will describe standard positioning terms (Active)
- ▶ **Positioning Method** The student will describe positioning methods for each projection (Active)
- ▶ **Corrective Measures** The student will determine corrective measures to improve a non-diagnostic image (Active)
- ▶ **Diagnostic Image** The student will identify a diagnostic image of the affected body part (Active)
- ▶ **Projection** The student will determine the projection required to best demonstrate a given anatomical area or pathology (Active)
- ▶ **General Body Position** The student will determine the general body position to best demonstrate a given anatomical area or pathology (Active)
- ▶ **Central Ray Direction** The student will determine the central ray direction for each projection (Active)
