## Degree

## 80 Percent Index - vs. Highest

Ethnicity
"Degree" takes a cohort of first-time students who took 6+ units and Math or English in three years and reports how may received a degree in six years.

## 80 Percent Index:

The outcome rate for the demographic group
divided by
the outcome rate for the reference group.
Two reference groups are used: 1) the highest rate of any group with more than 30 students
2) the average rate for the cohort

In other words, does the group succeed at least $80 \%$ as well as other groups?

Degree

## Degree

## Proportionality Index

Ethnicity
"Degree" takes a cohort of first-time students who took 6+ units and Math or English in three years and reports how may received a degree in six years.
Proportionality Index:
The percentage of those who achieved the outcome who are in the demographic group divided by
the percentage of the total cohort who are in the demographic group
In other words, is the group as frequent in the outcome as it is in the starting cohort?

## Disproportionate Impact: How to Calculate Proportionality

Proportionality compares the percentage of a disaggregated subgroup in an initial cohort to its own percentage in the resultant outcome group.

## An Example from Old Mac Donald's Animal Population

9 Ducks $=45 \%$ of the
animal population

4 Chickens $=20 \%$ of the animal population
= Animal population of 20

Ducks, rabbits and chickens are each subgroups. Altogether they are the initial cohort or population.

## What is the proportion of animals immunized for each subgroup?

10 animals or $50 \%$ have been immunized and 10 or $50 \%$ have not been immunized.

## Now that we have calculated proportionality, what is the disproportionate impact, if any?

Disproportionate impact occurs when the percentage of those from a particular subgroup is different from the representation of that group in the population.

This table gives the acceptable proportionalities.

| Level of Equity |  |
| :--- | :---: |
| Equity Index | Numerical Representation |
| Above Equity | Greater than or equal to 1.0 (=or $>1.0$ ) |
| Almost at Equity | $0.8-0.99$ |
| Below Equity | Less than $0.8(<0.8)$ |

There is a disproportionate impact for the chicken and rabbit subgroups regarding their immunizations because they are below equity.

The ducks = 1.56 and are above equity.
The rabbits $=0.86$ and are almost at equity. The chickens $=0.5$ and are below equity.

If ducks, rabbits and chickens were students and immunizations were placement into college level English classes, then we would say that there is a disporportionate impact for the chickens and rabbits regarding English placement results.

## Student Equity Summarized

Course Success The ratio of enrollments with passing greades to total enrollments(grades of $A, B, C, D, F, P, N P, W$ )

|  |  |  | Disproportionate Impact (2012-2013) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Demographic Group | Group with <br> Highest <br> Outcome \% <br> (2012-2013) | Group with <br> Lowest <br> Outcome \% <br> (2012-2013) | Proportionality I | dex | 80\% Highest <br> Method | Proportionality Index 5 Years of Cohorts Overall Trends |
| Gender | Unknown 74.1\% | $\begin{aligned} & \hline \text { Males } \\ & 70.6 \% \end{aligned}$ | Males almost at Equity | 0.99 | No Disproportionate Impact | Males trending closer to equity |
| Ethnicity | $\begin{gathered} \text { Asian } \\ \text { 78.70\% } \end{gathered}$ | African Americans 64.1\% | African <br> Americans almost at equity | 0.90 | No Disproportionate Impact | Variation from 0.88 to 0.90 |
| Age | $\begin{aligned} & 50+ \\ & 77 \% \end{aligned}$ | $\begin{gathered} 20-24 \\ 70.2 \% \end{gathered}$ | 20 to 24 almost at equity | 0.98 | No Disproportionate Impact | Trending closer to equity |
| Disability | $\begin{gathered} \text { No } \\ 71.70 \% \end{gathered}$ | $\begin{gathered} \text { Yes } \\ 67.50 \% \end{gathered}$ | Yes almost at Equity | 0.95 | No Disproportionate Impact | Trending closer to equity |

## Things to Note

* The course success rate of males is near equity.
* African Americans are nearing equity.
* Students 20-24 are nearing equity.
* Students with a disability are nearing equity with those that do not have a disability.

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Basic Skills Improvement English The percent of cohort students who progressed from remedial level to college or transfer level courses in math, English Writing, and credit ESL (Mt.SAC's AMLA) within 6 years.

|  |  |  | 50+ below equity | 0.55 | Disproportionate Impact | Variations from 0.55 to 1.06 Small cohort sizes <45 |
| Disability | $\begin{gathered} \text { No } \\ 50.8 \% \end{gathered}$ | $\begin{gathered} \hline \text { Yes } \\ 42.9 \% \end{gathered}$ | Yes almost at Equity | 0.85 | No Disproportionate Impact | Trending closer to equity |
| Economic Disadvantaged | Yes <br> 51.2\% | $\begin{gathered} \text { No } \\ 49.4 \% \end{gathered}$ | No almost at equity | 0.98 | No Disproportionate Impact | At Equity |

## Things to Note

* Asians who take basic skills English progress out better than average.
* Latino/a students progressing out of basic skills English slightly below other ethnic groups.
* Whites are just a bit above parity.
* Under age 20 students who take Basic Skills English progress better than average.
* All other age groups progresse out of basic skills English less than the average with little change after age 20.

Level of Equity

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Basic Skills Improvement AMLA The percent of cohort students who progressed from remedial level to college or transfer level courses in math, English Writing, and credit ESL (Mt. SAC's AMLA) within 6 years.

|  |  |  | Disproportionate Impact (2007-2008) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Disability | $\begin{gathered} \text { No } \\ 47.50 \% \end{gathered}$ | $\begin{gathered} \text { Yes } \\ 45.70 \% \end{gathered}$ | Yes almost at Equity | 0.96 | No Disproportionate Impact | Variations from . 78 to 1.09 <br> Small cohort sizes <49 |
| Economic Disadvantaged | $\begin{gathered} \text { Yes } \\ 50.80 \% \\ \hline \end{gathered}$ | $\begin{gathered} \text { No } \\ 43.80 \% \end{gathered}$ | No almost at equity | 0.92 | No Disproportionate Impact | Variations from . 87 to . 93 |

Things to Note

* Both genders progress out of AMLA at equal rates.
* Asians progress out of AMLA at the highest rates of all ethnic groups.
* Latino/a progress out of AMLA at low rates.
* Too few Whites or African Americans take AmLa to give reliable data.
* Students under 20 progress out of AMLA at the highest rate of all age groups.
* Progression out of AmLa decreases steadily with age.

Level of Equity

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Basic Skills Improvement Math The percent of cohort students who progressed from remedial level to college or transfer level courses in math, English Writing, and credit ESL (Mt. SAC's AMLA) within 6 years.

## Things to Note

* Females progress out of basic skills math at higher rates than males, but the difference is lessening as the rate for females declines.
* Asian students progress out of basic skills math at higher rates than the other ethnic groups.
* African Americans progress out of basic skills math below the average rate.
* Latino/a students are almost at equity in progressing out of basic skills math.
* The rate at which white students are progressing out of basic skills math has been declining.
* There is very little difference among the age groups in terms of progressing out of basic skills math.
* Overall, the rate at which all students are progressing out of basic skills math is low.

Level of Equity

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Certificates Earned credit certificates in programs approved by the Chancellor's Office.

|  |  |  | Disproportionate Impact (2007-2008) |  |  |  |

## Things to Note

* Students with a disability are more likely to earn a certificate than those that do not have a disability.
* Economically disadvantaged students are more likely to earn a certificate than those that are not.
* Males and females earn certificates at nearly the same rate, although there may be differences in the certificates they earn.
* White students earn certificates more than any other ethnic group.
* The certificate completion rate for African Americans has fluctuated over the span of time examined.
* The under 20 age group has a low certificate earning rate.
* Students over 30 earned the most certificates of all the age groups.

Level of Equity

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Degree Earned Associate in Arts or Associate in Science degree in programs approved by the Chancellor's Office.

## Things to Note

* Females earn more degrees than males.
* Whites earn more degrees than other ethnicity groups.
* The number of Asians earning degrees has dropped from one of the highest to one of the lowest.
* Latino/a students have steadily increased to nearly equitable levels for degrees earned.
* Older students are less likely to get degrees and this decline begins with the 20-25 year olds.
* The economically disadvantaged student is less likely to complete a degree than one who is not economically disadvantaged.

Level of Equity

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Transfer Transfer to four-year institution, public or private, within six years after enrolling at a CCC

|  |  |  | Disproportionate Impact (2007-2008) |  |  |  |

| Disability | $\begin{gathered} \hline \text { No } \\ 33.8 \% \end{gathered}$ | $\begin{gathered} \hline \text { Yes } \\ 18.6 \% \end{gathered}$ | Yes below equity | 0.56 | Disproportionate Impact | Variations from . 53 to . 71 |
| Economic Disadvantaged | $\begin{gathered} \text { No } \\ 37.4 \% \end{gathered}$ | $\begin{gathered} \text { Yes } \\ 30.7 \% \end{gathered}$ | Yes almost at equity | 0.93 | No Disproportionate Impact | Variations > 0.92 |

Things to Note

* Asian students have the highest transfer rates of any of the ethnic groups.
* African Americans are almost at equity when it comes to transfer.
* Non-traditional aged students are less likely to transfer than students who start before age 20.
* Students with a disability are less likely to transfer than students without a disability.
* The students that are not economically disadvantaged are more likely to transfer than those that are not.

Level of Equity

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
| :---: | :--- | :---: |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized - Foster Youth

Course Success The ratio of enrollments with passing greades to total enrollments(grades of $A, B, C, D, F, P, N P, W$ )

|  |  | Disproportionate Impact (2012-2013) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Demographic <br> Group | Group with <br> Highest Outcome <br> $\%(2012-2013)$ | Group with <br> Lowest <br> Outcome \% <br> (2012-2013) | Proportionality Index | $80 \%$ Highest <br> Method | Proportionality Index 5 Years of <br> Cohorts Overall Trends |
| Foster Youth* | Not Foster Youth <br> $71.7 \%$ | Foster Youth <br> $65.5 \%$ | Foster Youth <br> almost at Equity | 0.92 | No Disproportionate <br> Impact | | Foster Youth slowly trending closer to |
| :---: |
| equity |

*Note that Foster Youth are only 4\% of Cohort

## Things to Note

1) The course success rate for foster youth is near equity.

| Level of Equity |  |  |
| :---: | :--- | :---: |
|  | Above Equity | Greater than or equal to 1.0 |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized - Veterans

Course Success The ratio of enrollments with passing greades to total enrollments(grades of $A, B, C, D, F, P, N P, W$ )

|  |  | Disproportionate Impact (2012-2013) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Demographic Group | Group with <br> Highest Outcome <br> \% (2012-2013) | Group with <br> Lowest <br> Outcome \% <br> (2012-2013) | Proportionality Index | 80\% Highest <br> Method | Proportionality Index 5 Years of <br> Cohorts Overall Trends |
| Veteran* | Veteran <br> $72.3 \%$ | Not Veteran <br> $71.4 \%$ | At Equity | No Disproportionate <br> Impact | Both groups consistenly at equity. |

*Note that veterans represent only $3 \%$ of the cohort.

## Points to Note

1) Caution should be used in interpreting these results given the low percentage of veterans in the cohort.
2) The course success rates for veterans and those who are not veterans are at equity. In the last three years, veterans consistently have a slightly higher proportionality index than those who are not veterans ( 0.01 to 0.06 difference).

| Level of Equity |  |  |
| :--- | :--- | :---: |
| Proportionality Index | Above Equity | Greater than or equal to 1.0 |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Measure by Age and Veteran
Fourteen Demographic Groups Compared

| Veteran Under 20* | Veteran 25 to 29 | Veteran 35 to 39 | Veteran 50+ |
| :--- | :--- | :--- | :--- |
| Non-Veteran Under 20 | Non-Veteran 25 to 29 | Non-Veteran 35 to 39 | Non-Veteran 50+ |
| Veteran 20 to 24 | Veteran 30 to 34 | Veteran 40 to 49 |  |
| Non-Veteran 20 to 24 | Non-Veteran 30 to 34 | Non-Veteran 40 to 49 |  |

|  |  |  | Disproportionate Impact (2012-2013) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Measure | Group with Highest Outcome \% (2012-2013) | Group with Lowest Outcome \% (2012-2013) | Proportionality Index (PI) | 80\% Highest <br> Method | Proportionality Index 3 Years of Cohorts Overall Trends |
| Course Success | $\begin{gathered} \text { Veteran 50+ } \\ 80.7 \% \end{gathered}$ | Veteran $\begin{gathered} 40 \text { to } 49 \\ 66.9 \% \end{gathered}$ | Not Veteran 20 to 24, PI = 0.98 <br> Veteran 35 to $39, \mathrm{PI}=0.94$ <br> Veteran 40 to 49, $\mathrm{PI}=0.94$ <br> Almost at Equity | No Disproportionate Impact | Except for three, most groups are consistently at equity. Two groups, veterans in the 35 to 39 and the 40 to 49 age categories have been trending away from equity while the 20 to 24 nonveterans have been consistently close to equity (0.98). |

*Note that there are only 21 veterans under the age of 20.

## Points to Note

1) Veterans in the age group 20 to 24 have a higher course success rate than non-veterans in the same age group.
2) After age 30, veterans have lower course success rates than non-veterans in the same age group.
3) There are too few veterans to give reliable numbers under age 20 and over age 50.

| Level of Equity |  |  |
| :--- | :--- | :---: |
| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

## Measure by Disability and Gender

Six Demographic Groups Compared

| Disabled Males | Not Disabled Males |
| :--- | :--- |
| Disabled Females | Not Disabled Females |
| Disabled Gender Unknown | Not Disabled Gender Unknown |

|  |  |  | Disproportionate Impact (2012-2013) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Measure | $\begin{aligned} & \text { Group with } \\ & \text { Highest } \\ & \text { Outcome \% } \\ & (2012-2013) \\ & \hline \end{aligned}$ | Group with Lowest Outcome \% (2012-2013) | Proportionality Index (PI) | 80\% Highest <br> Method | Proportionality Index 3 Years of Cohorts Overall Trends |
| Course Success | Not Disabled Gender Unknown** 75.8\% | Disabled <br> Gender Unknown* 59.2\% | Disabled Females, $\mathrm{PI}=0.95$ <br> Disabled Males, PI $=0.94$ <br> Disabled Gender Unknown, $\mathrm{PI}=0.83$ <br> Not Disabled Males, PI $=0.99$ <br> Almost at Equity | Disproportionate <br> Impact (Disabled <br> Gender Unknown only) | All groups fairly stable for the last 3 years. |

[^0]
## Points to Note

1) The impact of disability does not vary by gender.
2) There is no disproportionate impact for males and females with or without disabilities.
3) Caution should be used when interpreting the $80 \%$ highest method due to the disabled gender unknown, who had the highest outcome rate but represented a very low percentage of the cohort.

| Level of Equity |  |  |
| :--- | :--- | :---: |
| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

Measure by Disability and Gender
Six Demographic Groups Compared

| Disabled Males | Not Disabled Males |
| :--- | :--- |
| Disabled Females | Not Disabled Females |
| Disabled Gender Unknown | Not Disabled Gender Unknown |

|  |  |  | Disproportionate Impact (2007-2008) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Measure | Group with Highest Outcome \% (2007-2008) | Group with Lowest Outcome \% (2007-2008) | Proportionality Index (PI) | 80\% Highest Method | Proportionality Index 5 Years of Cohorts Overall Trends |
| BSI English* | Not Disabled Female 51.6\% | Disabled Male 42.9\% | Disabled Females, $\mathrm{PI}=0.85$ <br> Disabled Males, PI $=0.85$ <br> Not Disabled Males, $\mathrm{PI}=0.99$ <br> Almost at Equity | No Disproportionate Impact | Males (disabled or not) are trending towards equity, with disabled males making large gains. |
| BSI AmLa* <br> (very few disabled students in this cohort) | Disabled Male (19 students) 52.6\% | Disabled Female (16 students) 37.5\% | Disabled Females, $\mathrm{PI}=0.79$ Below Equity | Disproportionate Impact (Disabled Females) | Disabled females were moving away from equity but now moving towards equity (0.70- 1.27) |
| BSI Math* | Not Disabled Female 38.5\% | Disabled Male 33.3\% | Disabled Males, PI = 0.91 <br> Not Disabled Males, PI $=0.95$ <br> Almost at Equity | No Disproportionate Impact | A lot of fluctuation among disabled males (0.52-1.23) |

*Excluded Gender Unknown due to small number (<19)

## Points to Note

1) For BSI English, the gender of disabled students no longer makes a difference, although it did for earlier cohorts.
2) Both disability and gender impact BSI math; those who are male or disabled are less likely to progress.

| Level of Equity |  |  |
| :---: | :--- | :---: |
|  | Above Equity | Greater than or equal to 1.0 |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

*Excluded Gender Unknown due to small number (<25)

## Points to Note

1) The PI fluctuation for certificates may be due to the automatic issuance of certificates in 2006-07.
2) Both disability and gender impact degree completion; those who are male or disabled are less likely to receive a degree, but gender has the larger impact.
3) Gender has little impact on transfer for non-disabled students. However, disabled females are more likely than disabled males to transfer, although both are less likely to do so than non-disabled students.
4) Disability seems to have an impact on both males and females with regard to transfer; disabled males and females fall below equity and have a disproportionate impact.

| Level of Equity |  |  |
| :--- | :--- | :---: |
| Proportionality Index Above Equity Greater than or equal to 1.0 <br>  Almost at Equity Below Equity$\quad 0.8-0.99$ |  |  |

## Student Equity Summarized

Measure by Economic Disadvantage and Gender
Six Demographic Groups Compared

Economic Disadvantaged Males
Economic Disadvantaged Females
Non-economic Disadvantaged Females
Economic Disadvantaged Gender Unknown Non-economic Disadvantaged Gender Unknown

|  |  |  | Disproportionate Impact (2007-2008) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Measure | Group with Highest Outcome \% (2007-2008) | Group with Lowest Outcome \% (2007-2008) | Proportionality Index (PI) | 80\% Highest <br> Method | Proportionality Index 5 Years of Cohorts Overall Trends |
| BSI English* | Economic Disadvantaged Female 52.3\% | Non-economic Disadvantaged Male 49.1\% | Economical Disadvantaged Male, PI = 0.99 <br> Non-economic Disadvantaged Male, PI = 0.98 <br> Non-economic Disadvantaged Females PI $=0.99$ <br> Almost at Equity | No Disproportionate Impact | Female disadvantaged and nondisadvantaged PIs generally at equity, the male disadvantaged and nondisadvantaged PIs generally almost at equity |
| BSI AmLa* | Economic <br> Disadvantaged Male <br> 52.3\% | Non-economic Disadvantaged Male 41.2\% | Non-economic Disadvantaged Males, PI $=0.87$ <br> Non-economic Disadvantaged Females PI = 0.96 Almost at Equity | Disproportionate Impact <br> (Non-edonomic <br> Disadvantaged Males) | The PI for non-disadvantaged males and females fluctuate within the almost at equity range |
| BSI Math* | Economic Disadvantaged Female 38.7\% | Non-economic Disadvantaged Male 34.0\% | Economical Disadvantaged Male, $\mathrm{PI}=0.97$ <br> Non-economic Disadvantaged Male, PI $=0.92$ <br> Almost at Equity | No Disproportionate Impact | The PI for males, disadvantaged or not, seem to be trending towards equity |

*Excluded Gender Unknown due to small number (<13)

## Points to Note

1) For BSI English, gender seems to have a greater impact than economic disadvantage.
2) For BSI AmLA, economic disadvantage seems to have a greater impact than gender.
3) For BSI math, gender currently has greater impact than economic disadvantage. Previously, non-economic disadvantaged females progressed out of basic skills math at a higher rate, but this has declined to be similar to economically disadvantaged females.

| Level of Equity |  |  |
| :---: | :--- | :---: |
|  | Above Equity | Greater than or equal to 1.0 |
|  | Almost at Equity | $0.8-0.99$ |
|  | Below Equity | Less than 0.8 |

## Student Equity Summarized

## Measure by Economic Disadvantage and Gender

Six Demographic Groups Compared

Economic Disadvantaged Males
Economic Disadvantaged Females
Economic Disadvantaged Gender Unknown

Non-economic Disadvantaged Males
Non-economic Disadvantaged Females Non-economic Disadvantaged Gender Unknown

|  |  |  | Disproportionate Impact (2007-2008) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Measure | Group with Highest Outcome \% (2007-2008) | Group with Lowest Outcome \% (2007-2008) | Proportionality Index (PI) | 80\% Highest Method | Proportionality Index 5 Years of Cohorts Overall Trends |
| Certificate* | Economic Disadvantaged Male 3.0\% | Economic Disadvantaged Female 2.5\% | Economic Disadvantaged Females, $\mathrm{PI}=0.92$ Non-economical Disadvantaged Females PI $=0.96$ Non-economic Disadvantaged Males, $\mathrm{PI}=0.97$ Almost at Equity | No Disproportionate Impact | Males, disadvantages or not, consistently at equity or close to it (0.90-1.16) |
| Degree Completion* | Economic Disadvantaged Female 19.1\% | Non-economic Disadvantaged Male 9.6\% | Economic Disadvantaged Males, $\mathrm{PI}=0.86$ Almost at Equity <br> Non-economic Disadvantaged Males, $\mathrm{PI}=0.63$ Below Equity | Disproportionate Impact (Males, disadvantaged or not)* | Economically disadvantaged males trending up but dropped in 2007-08, non-economically disadvantaged males trending down |
| Transfer* | Non-economic Disadvantaged Female 38.6\% | Economic Disadvantaged Male 30.1\% | Economic Disadvantaged Males, $\mathrm{PI}=0.91$ Economic Disadvantaged Females, $\mathrm{PI}=0.94$ Almost at Equity | Disproportionate Impact (Economic Disadvantaged Males) | Economically disadvantaged female PI fairly stable at almost at equity (0.900.94) |

*Excluded Gender Unknown due to small number (<15)

## Points to Note

1) For certificates over the five cohorts, the major difference has been that non-disadvantaged females received certificates at the lowest rate while economically disadvantaged females did so near the highest rate. In the most recent cohort, these two groups have nearly equal rates.
2) Both economic disadvantage and gender impact degree completion, with those who are male and not economically disadvantaged less likely to complete a degree.
3) Economic disadvantage and gender have a converse effect on transfer. For non-economically disadvantaged students, females are more likely to be at equity with regard to transferring than males, while for economically disadvantaged students, males are more likely to be at equity than females.

| Proportionality <br> Index | Above Equity | Greater than or equal to 1.0 |  |
| :--- | :--- | :---: | :---: |
|  | Almost at Equity | Below Equity | $0.8-0.99$ |

[^0]:    *Please note that Disabled Gender Unknown comprise 0.1\% of cohort
    **Please note that Not Disabled Gender Unknown comprise 0.8\% of cohort
