

CALIFORNIA'S POPULATION INCREASES BY 301,000,
CONTINUING STATE'S MODERATE GROWTH RATE

FOR IMMEDIATE RELEASE:
December 21st, 2017

CONTACT: Phuong Nguyen/Ethan Sharygin

SACRAMENTO – California's population grew by 301,000 people between July 1, 2016 and July 1, 2017 to total 39.6 million, according to official population estimates released today by the Department of Finance. This represents a growth rate of 0.77 percent.

Net migration added 80,000 persons to California. Net migration is the total number of legal and unauthorized immigrants and movers to California from other U.S. states, less the number of Californians who moved to another state or abroad.

California has 58 counties ranging in size from Alpine County, with just over 1,100 residents to Los Angeles County with over 10 million residents. Since the national census on April 1, 2010, the state has gained 2.4 million persons. There have been 3.6 million births, 1.8 million deaths for a natural increase of 1.8 million, and 1.1 million net foreign immigrants.

Inland counties had the highest population growth rates. Urban coastal counties gained population at a slower pace. Smaller counties in more remote areas of California either lost population or grew very little.

Highlights of the July 1, 2017 county population report include:

- The state's nine largest counties are Los Angeles, San Diego, Orange, Riverside, San Bernardino, Santa Clara, Alameda, Sacramento, and Contra Costa. Each has over one million residents. These nine counties represent 70 percent of California's population.
- Los Angeles, Riverside, San Diego, Orange, and San Bernardino counties posted the highest numeric population gains at 20,000 persons or more in each county and accounted for more than half of the state's growth. Growth in these five counties was due primarily to natural increase. Although all counties in the top five numeric gains had positive net migration, only Riverside gained population from both domestic and international migration. Other counties had negative net domestic migration, which was made up for by a sufficiently high number of immigrants.
- Compared to the statewide average, 18 counties had a higher growth rate while 27 counties had the same or lower rates. Thirteen counties posted population losses from -0.02 percent in Mono to -0.78 percent in Alpine.

- Placer, Stanislaus, Merced, San Joaquin, and Riverside counties had the largest percentage increases in population, each growing by 1.28 percent or more. Merced was the new county in the top five of counties with strong population growth. Population change ranged from the highest growth rate of 1.56 percent in Placer to the lowest growth rate of -0.78 percent in Alpine.
- Although natural increase was a significant source of growth in the state, 13 counties experienced natural decrease (more deaths than births during the year) – Alpine, Amador, Calaveras, Inyo, Lake, Mariposa, Nevada, Plumas, Shasta, Sierra, Siskiyou, Trinity, and Tuolumne. Among those counties, Inyo was newly added to the list of the natural decrease counties. El Dorado and Modoc were back in the list of counties with positive natural increase this year.

The birth rate declined to 12.3 births per 1,000 population from 13.8 births per 1,000 population in 2010. Birth rates continued to decline and reached the fourth lowest level since the beginning of our data in 1905. As the baby boomer generation advances towards retirement ages, the death rate has slowly increased to 6.7 deaths per 1,000 population, up from 6.2 in 2010. Natural increase, births minus deaths, remains the primary source of the state's population growth. The natural increase of 221,000 was comprised of 486,000 births minus 265,000 deaths.

Population estimates produced by the Department of Finance are mandated by the California Constitution and various codes. They are used by state agencies, California counties, academic institutions, private research organizations, the media, and the public. Primary uses include budgeting, needs assessment, program planning and evaluation, distribution of state funds, and the calculation of rates (such as birth, death, and incarceration).

Population estimates are developed using aggregate data from a variety of sources, including birth and death counts provided by the Department of Public Health, number of driver's licenses and driver's license address change data from the Department of Motor Vehicles, housing unit data from local governments, school enrollment data from the Department of Education, and federal income tax return data from the U.S. Internal Revenue Service. These statistical reports of administrative records do not disclose any information about individuals.

County ranking tables, maps, and the E-2 (*California County Population Estimates and Components of Change by Year, July 1, 2010-2017*) methodology and data tables are included. The E-2 and companion reports E-6 (*Population Estimates and Components of Change by County, July 1, 2010-2017*) and E-7 (*California Population Estimates, with Components of Change and Crude Rates, July 1, 1900-2017*), are on the Department's website: <http://www.dof.ca.gov/Forecasting/Demographics/Estimates>.
