

MountieApp Feedback (As of 5/20/2019)

- The app is amazing! I am a current student at the community college, looking up for classes when registering and pay fees all together. It is very convenient when you do not want to log in to the website and use the app.
- Loving it! I love how easy it is to access my courses, drop or add, get notifications, important numbers, calendar and the news. It's easy to maneuver through the app and to find exactly what you're looking for. I am especially enjoying the news, calendar, and social media tabs because sometimes I don't know what's going on campus and this is the easiest way to stay updated. Thanks for such a convenient and smooth app J
5/5 stars *****
- Great app to quickly check on your portal! way better than having to go to a computer. Interface is really nice as well! Glad I found out about this app.
- This app is such a great way to transition my way into college! With the Map put into the app, I am able to navigate my way easily around campus with minimal problems! Another feature that I think is also helpful is the viewing/paying fees and adding/dropping classes. These features are such a convenient way to do stuff on the go when you're trying to save some time at home. However these are just a few of the features that I mentioned, there are many other features that I have yet to explore!
- This app is very useful for all student who cant make it to mt sac to make their fees
- Compared to the first prototypes, this is so much more smoother and pleasing to the eye! Everything you need is there, and the maps is going to definable be helpful to newcomers. I would recommend a pop-up saying "You will be redirected to Safari" in the Admissions tab, just to let people know it's not through the actual app. Also, the login to be in huge letters in the front/home page for older people to see better and navigate easier
- Works great and easy to use
- Great
- Massive improvement over the old Mountie App, but some convenient features are unfinished or non-existent. Fingerprint sign-in is not available as of this writing, there's no option to view portal websites in-app (it redirects to your phone's browser), and the option to view current homework from each course was removed. Still, it does present your current courses and schedule well, so it isn't all that bad.
- Useful. The app is very useful and provides quick access to information on the go. Unfortunately, I have to keep re-logging into my portal whenever I click anything under Registration. I think it would also be useful to add a tab for career/job opportunities. Overall I enjoy the app!
- The app has a similar look and feel to the desktop website which makes it easy to use if you're used to going on a computer to access your student account. I like how you can add/drop classes on the app which is very convenient when you're not able to use a computer but you have your phone on you.
- I love how the app has a map of the campus. Its a big campus so its always helpful if I'm not sure where my classes are.
- An option to be able to check your mail would be really helpful. It's a hassle having to log into your portal through the mt sac website each time you want to check your email.
- Seems to just redirect to the mt sac webpage instead of having any actual use in app (for add/drop at least)
- They made the app a lot faster than the last one they had. It is convenient and useful. Will be using more often since I spend a lot of time on their web page.
- The Mountieapp is best for adding or dropping classes, viewing your schedule, redirecting you to the mtsac portal, or paying fees. It has been absolutely instrumental in my first year at Mtsac and it's very straight forward. The only way it could possibly be better would be to show you current grades in addition to final grades that are already in Canvas but I understand that linking two apps in this way is incredibly challenging and not all teachers even use Canvas. According to the previous reviews, the developers are actually paying attention to what's being said because I'm not seeing any of the issues that were described previously. Keep up the good work guys!
