

May 29, 2015

Dr. Scroggins,

The California Investor Owned Utilities (Southern California Edison, Southern California Gas, Pacific Gas & Electric and San Diego Gas & Electric) are in the process of soliciting a third party vendor to develop new Statewide post-secondary Energy Efficiency Education and Training to start in 2016. The 2013-15 Utility funded program, is currently being implemented at the **Mt. San Antonio College**, El Camino College and College of the Desert. We are pleased to present this unique opportunity and solicit your partnership in this new Developing Energy Efficiency and Demand-Side (DEEDS) Professionals program.

DEEDS is designed to educate and train California College students in the areas of Energy Efficiency, Demand Response, and Distributed Generation, through classroom learning, on-campus projects, with career training and development focus to foster interest and preparation in green careers. In addition, the on-campus projects and campus awareness are also designed to produce reductions in facilities operational costs.

The program has two goals:

Goal 1: Energy Efficiency Education and Training program designed to provide students with training and on-campus work experience to support their career development. Students will be guided by program coordinators, faculty and administrative staff on campus.

Goal 2: The DEEDS students play an important role in the area of academic infusion, on-campus green projects and campus awareness designed to produce savings in facilities operational costs.

We are pleased to attach a one-page program fact sheet for your review. As time is of the essence and campus selection is on a first come basis please let us know when we can meet your staff for an in person presentation.

Meanwhile, please contact us if you have any questions.

Thank you and Best,

Carlos A. Hernandez, M.S.
