

# New Student Orientation Pre-Post Test Surveys 2016

The following data is comprised of Pre and Posttest from New Student Orientation. The average score for each of the survey questions is compared by pretest and posttest. This is an aggregate analysis, because we are not comparing the score change for individual students. A total of 5,728 surveys were analyzed between pretest (2,970) and posttest (2,758). All respondents were 18 years old or older. If they did not meet the age requirement, they were excluded from the survey analysis.

## Findings

- Based on the data, there were sizeable changes between pretest and posttest. Using .50 as a marker for sizeable change, 10 out of 13 items met or exceeded that standard.
